Solution: Nested ForEach Activities & Bucket Metadata

SSIS IR

```
;WITH maxBuckets AS

    SELECT MAX([BucketId]) AS 'MaxBucket' FROM [dbo].[Buckets]
)
INSERT INTO [dbo].[BucketToProcessMap]
SELECT
    CASE
        WHEN (ROW_NUMBER() OVER (ORDER BY p.[Duration] DESC) * 1)
        % maxBuckets.[MaxBucket] = 0 THEN maxBuckets.[MaxBucket]
        ELSE (ROW_NUMBER() OVER (ORDER BY p.[Duration] DESC) * 1)
        % maxBuckets.[MaxBucket]
    END AS 'NewBucketId',
    p.[ProcessId]
FROM
    [dbo].[BucketProcesses] p
CROSS JOIN maxBuckets
```

SSISDB

```
SELECT [BucketId] FROM [dbo].[Buckets] WHERE [Enabled] = 1

Hub & Spoke Integration Architecture

Testing

🔗 **Integration Tests** - A test of a pipeline as-is, without eliminating any effects of external dependencies.

🔗 **Functional Tests** - An isolated test of whether the pipeline is doing things right – is the pipeline producing the desired result?

🔗 **Unit Tests** - An isolated test of whether the pipeline is doing the right things – do the pipeline's activities get executed in the way you expect?
